

# DEPOT FOR MOBILE CLEANING APP

“ Our staff could start using it right away

## HOW THE DEPOT CLEANING APP SUPPORTS SAFE AND COMPLIANT TANK CLEANING

At a leading depot where tank containers are cleaned daily, the DEPOT for Mobile Cleaning App is actively used to support the entire cleaning process—from safety instructions to digital checklists. The app brings structure, clarity, and compliance to the work floor.

“Our cleaning staff select a cleaning order, read the safety instructions, and can immediately start the cleaning process. If any extra work is needed, they can simply add it afterwards,” says the operations manager.

The impact is clear:

“In an industry where environmental regulations and industry standards are becoming increasingly strict, this app helps us demonstrate compliance. Everything is digital, traceable, and instantly accessible.”

This mobile module is an add-on to the core DEPOT Software and can be activated quickly.

“The implementation went smoothly. And importantly, our staff could start using it right away, no complicated instructions needed.”

### BENEFITS OF THE DEPOT CLEANING APP

- Fully digital workflow

From order selection to final checks – all in one app. No more paper forms.

- Real-time visibility and control

Live status updates and easy access to completed cleanings.

- Supports full compliance

Meets strict environmental and industry standards. Enables safe and demonstrable compliance.

- Quick to implement

Ready to use immediately after activation. No lengthy training required.

- Built for the work floor

Compatible with ATEX-certified, rugged devices. Easy to use even with gloves.

“

Practical tip from the field:

“Make sure to use suitable devices: ATEX-certified for use in explosive environments and durable enough to handle gloves. That really makes a difference in day-to-day operations.”
