

The result of the implementation of DEPOT Software is far beyond our expectations! Cutting down 2 FTEs and 4 times as much turnover is a very pleasant outcome using the software.

# DEPOT SOFTWARE

## CUSTOMER CASE: VAN MOER

 Depot Software

**DEPOT Software**  
De Zelling 8, 3342GS H-I-Ambacht,  
The Netherlands

## “ We already heard good reports about DEPOT Software in our network, so we decided to get started with it.

Joris Emanuel is IT Manager at Van Moer: “We came across DEPOT Software via our network and it was time to reach out about the possibilities for our company. The main criteria we had for our new software were: Lean working, set-up a customer-specific administration and create overview of our schedules. The performance is above expectations! Due to the software, we managed to save several FTEs and achieved a turnover growth of no less than 4x in the past three years.

Joris Emanuel, IT Manager Van Moer

**Van Moer Cleaning & Repair is a one-stop-shop depot in Zwijndrecht, Belgium. The company offers a wide range of services in the field of bulk and tank container logistics. All services are provided within the same facility that is located on 2.5 ha:**

### **SERVICES:**

- Storage
- Heating & Chilling
- Repair & Modifications
- Cleaning
- Installing liner & flexi bags

Van Moer has 1,700 employees, 200 of whom are directly involved in the depot services.

## “ PAPER AND EXCEL SHEETS

**Before, the company processed the orders on paper. They manually entered the data into different systems and kept Excel lists.**

For a small depot, manual administration works fine, but Van Moer needed a change: they wanted insight into the daily planning, leave registration and have an invoicing module to properly specify rates per product and customer. By digitizing, Van Moer has achieved 4x more turnover with the same number of people. With the implementation of the new software, the tasks of two employees were freed up:

**“We are very pleased that we can deploy these employees in other positions where they are most needed.”**

## WORKING DIFFERENTLY DUE TO DIGITIZATION

**DEPOT Software offers Van Moer the opportunity to support all depot services in one system. The optimization process is now being trusted, but the start of the software implementation process was difficult:**

“It took a while to find the right mode. Working too abstractly or theoretically does not fit into our culture. The project really took off after we put together a new team. The new team members settled into their place at Van Moer and fit in very well with the team. Working together in a no-nonsense way and having fun while doing it, creates a strong bond.”

# THE NEXT MOVE WITH DEPOT SOFTWARE

IN ADDITION, VAN MOER WANTS TO MAKE THE NEXT MOVE WITH DEPOT SOFTWARE. HELPING THEM:

- Digitizing the pre-applications
- Support the registration process with the 'Driver Kiosk' and
- Recognize/scan tank containers with OCR (Optical Character Recognition)

Also, the development of the new drumming services has started this year. Engineers from INEOS and developers from DEPOT Software work on seamlessly connecting the infrastructure and software. Another example is the integration with Groninger Cleaning Systems. The water purification system has been renewed with sustainable pumps and piping systems. Data can be easily reported in DEPOT Software via the PLC. For the Repair service, Van Moer wants to ensure savings in terms of electricity and (waste) material. The software helps with time registration, reports on differences in estimations and a complete disposal module.

## FULL MANAGEMENT SERVICES

**Emanuel's' vision for Van Moer is to use DEPOT Software as a mix of full management services with the integration of the psychical traffic plan:**

“We would like to have full support on extensive and continuous development of new functionalities, advice on hardware and delivery - tailored to our processes and users -, developing and maintaining various APIs and with our internal IT department.”

This collaboration on full management services ensures Van Moer to efficiently and easily deploy DEPOT Software one-on-one at various full-service depots. Like Bertels International, the tank container depot that Van Moer recently acquired: “Bertels will certainly not be the last entity that Van Moer will add to its chemicals portfolio. DEPOT software will therefore receive substantial expansions in the coming years and we are looking forward to that.”

Get results beyond your expectations  
with the help of DEPOT Software.
